Github Projects

Professional Summary

Analytical and detail-oriented Analyst with 1.5+ years of experience in operational data handling, compliance support, and process optimization. Proven ability to source, clean, and manage large-scale datasets across financial services and analytics domains. Experienced in streamlining workflows, supporting client-facing deliverables, and enabling insight-driven decisions. Adept at adhering to high-quality standards, regulatory compliance, and business objectives in fast-paced environments. Strong communication, stakeholder engagement, and cross-functional collaboration skills.

Professional Experience

Data Analyst

Nov 2025 – Present

Finlytx AI Labs

Currently working as a Data Analyst, I design interactive Power BI dashboards and perform Excel-based data cleaning to deliver accurate, actionable insights that support strategic business decisions. My work lays the foundation for advanced analytics, aligning with my broader expertise in predictive modeling, business intelligence, and data-driven optimization.

Data Analyst Intern

Jan 2025 – April 2025

Insight Fusion Analytics

Skilled in Big Data and Predictive Analytics, with a focus on extracting actionable insights to support strategic decision-making. Experienced in building Machine Learning and AI models for automation, forecasting, and process optimization. Proficient in Business Intelligence tools to enable data-driven solutions. Also apply advanced analytics in algorithmic trading to enhance financial strategies. Committed to delivering intelligent, performance-driven solutions that create real business value.

Big Data & Data Analyst Intern

Nov 2023 – Jun 2024

Luminar Technolab

Designed and maintained scalable data pipelines using Spark and Hadoop to handle large-scale data efficiently. Streamlined ETL workflows, improving overall performance by 20%. Applied machine learning to uncover patterns and generate predictive insights from complex datasets. Delivered robust data solutions that empowered informed business decisions.

Team Assistant

Jun 2022 – Nov 2023

Biju and Biju CA Firm

Verified loan applications by collecting and analyzing large datasets for NBFCs in Kerala. Developed automated solutions using Excel and Python to enhance data processing efficiency. Earned positive feedback from both office and field staff for delivering accurate and timely results.

Technical Skills

- **Analytics & BI Tools:** Power BI, Excel
- **Programming & Scripting:** Python (Pandas, NumPy, Scikit-learn, TensorFlow, PyTorch), SQL
- **Data Science & Machine Learning:** Data Cleaning, Feature Engineering, Predictive Modeling, Deep Learning, NLP
- **Big Data & Cloud Technologies:** Spark, Hadoop, Google Collab, Jupyter Notebook
- **Data Collection & Automation:** Web Scraping (BeautifulSoup, Selenium), API Integration (SerpAPI, Binance, Fyers API)
- **Business & Marketing Analysis:** Business Development, Customer Insights, Market Research
- **Finance & Trading:** Algorithmic Trading, Technical Analysis, Forex & Crypto Trading
- **E-commerce & Odoo ERP:** Product Data Analysis, Odoo Functional Testing

Education

Bachelor of Commerce - Finance

2019 - 2022

St Thomas College - Thrissur
2019 - 2022

Gained a strong foundation in accounting, finance, and business analytics, developing analytical and problem-solving skills essential for data-driven decision-making.

Projects

Dr. Chloro Power BI Dashboard - Client Project

- Collected, cleaned, and transformed raw sales and customer data using Power Query for consistent reporting.
- Created dynamic visuals such as line charts, clustered bar charts, slicers, and KPI indicators to track revenue growth, product performance, and regional sales distribution.
- Implemented DAX measures for calculating key metrics including profit margins, customer retention rate, and seasonal demand analysis.
- Enabled drill-through functionality and interactive filtering for better decision-making.
- Delivered actionable insights that helped identify top-selling products, underperforming regions, and potential areas for targeted marketing campaigns.
- **Tools:** Power Bi

Amazon Product Scraper

- **Developed a CAPTCHA solver:** Implemented a CAPTCHA solver using EasyOCR and OpenCV, combining adaptive thresholding for image preprocessing with deep learning-based text recognition for improved accuracy.
- **Web Scraping & Automation :** Built a Python scraper using Selenium to extract product details (e.g., title, price, ratings, availability) from Amazon, handling dynamic content with scrolling and lazy-loading techniques.
- **Robust Data Extraction :** Prioritized ID-based selectors for reliable data extraction and used CSS selectors as fallbacks, ensuring clean and structured data collection for 50+ products.
- **Data Storage & Scalability :** Saved scraped data into **CSV files** using Pandas, ensuring scalability and readiness for further analysis or integration into downstream applications.
- **Tools:** Visual Code

Sales Forecasting Project

- Merged and cleaned historical sales and store metadata to create a unified dataset, handling missing values and data types.
- Engineered time-based, promotional, and competition-related features to improve model accuracy and capture sales trends.
- Built a Random Forest regression model to forecast daily sales, ensuring prevention of data leakage with proper time-based validation.
- Evaluated model using MAE and RMSE metrics, and documented the end-to-end pipeline in a well-structured Jupyter notebook.
- **Tools:** Visual Code, Google Collab

Emotion-Aware AI Chatbot (Text, Audio & Video)

- **Developed a multimodal emotion-aware AI chatbot** using Flask, integrating **text, audio, and video-based emotion detection** with deep learning models (CNN, YOLOv8, and speech processing) for dynamic user engagement.
- **Enabled real-time sentiment classification** from voice (via Librosa, Pydub) and facial expressions (via YOLOv8), and enhanced chatbot responses using emotion-labeled inputs from a custom-trained NLP model.
- **Designed REST APIs for chat, audio, and video processing**, ensuring seamless frontend integration, emotion prediction, and personalized responses using ChatterBot and TensorFlow-based models.
- **Tools:** Visual Code, Google Collab, Flask, HTML, CSS

Crypto Testing Strategy Backtesting Project

- Developed an automated backtesting engine to simulate crypto trades using 1-minute Binance historical data, aggregated to 4-hour intervals for trend analysis.
- Engineered a custom long-entry trading strategy using technical indicators like RSI, MACD, Bollinger Bands, SMA crossover, and volume ratios to assess market conditions.
- Implemented risk management techniques including dynamic trailing stops, time-based exits, and volatility-based entry filtering to optimize profit-to-risk ratio.
- Logged trade executions and calculated performance metrics such as drawdown, monthly profit, win rate, and portfolio value over time using structured CSV outputs.
- Designed modular scripts for data collection, feature calculation, strategy execution, and result logging, ensuring scalability and transparency in results.
- **Tools:** Visual Code, Binance API
